DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hunjan et al. (US 5906590) in view of Cohen et al. (US 4686963), and Schmitt and Savage et al (US 5507725)

Hunjan discloses the claimed invention including a steerable catheter assembly including a catheter, a tip section, a control handle and puller wire control system. Hunjan does not explicitly disclose the specific means for stabilizing the steerable tip, or a tip section including a core and an outer layer covering the core. Cohen discloses a bi-directional control system for a any device controlled by torsion resistant articulation comprising a pair of stabilizing features disposed in the outer cylindrical wall and diametrically opposed in the tip portion of the catheter, or alternately a single stiffening means along the longitudinal axis, Figures 11, 12. Schmitt discloses the use of metal, fabric or plastic strips for providing stabilizing means incorporated into the catheter body. Savage discloses a steerable catheter having a flexible tip section comprising a core 50 and an outer layer 28 covering the flexible core. It would have been obvious to one of ordinary skill in the art at the time the invention was made, in view of Cohen Schmitt and Savage, to modify the device of Hunjan to include an outer layer with stabilizing elements incorporated therein in order to better control the bending of the steerable catheter

Art Unit: 3742

assembly and to include a biocompatible flexible covering layer over the core in order to protect the body from adverse reactions with the core while maintaining the flexibility of the tip section. With respect to claims 7, 9, 21, and 23, the method of forming the device is not germane to the issue of patentability of the device itself. Therefore, this limitation has not been given patentable weight.
